

NEW PRODUCT RELEASE

FTT-200

LMC Systems

USB Foot Pedal

This newly released foot pedal is based on existing solid technology. The user can easily program a simple keystroke or an entire string of keystrokes. Strings of commands can be executed all at once or by sequential presses of the foot pedal. The FTT-200 comes with the programming utility built in. No software to download. Far superior to consumer grade foot devices this is built to take on a daily production work load. Save employee time and labor with repetitive keystrokes.

Examples of use:

- Tab through forms
- Printing of forms
- Medical imaging applications
- Industrial control applications
- Hands free options for the disabled
- Hotkeys to match software applications
- Lock or unlock workstations
- Execute macros
- Push to talk (PTT) for VoIP software

Features:

- The user has full control of keystroke choices
- Easily user programmable
- Rugged device built for heavy use applications
- No external software
- No I.T. delays with software approval
- Multiple footpedal use for single workstation (Except Windows™ XP)
- Help avoid repetitive motion injuries
