

FTT-300

LMC Systems

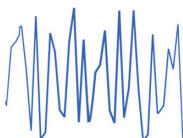

USB Game Port Foot Pedal

The FTT-300 is specifically designed for use with any PTT (push to talk) software using game port commands rather than keyboard commands.

FTT-300 is compatible with industry standard game port signal. This is an alternative to Plantronics game Port Foot Pedal with similar cost and short delivery time. Far superior to consumer grade foot devices this is built to take on a daily production work load.

Features:

- USB 2.0 standard
- Rugged device built for heavy use applications
- No external software required
- No I.T. delays with software approval
- Multiple footpedal use for single workstation (Except Windows™ XP)
- Help avoid repetitive motion injuries
- Developers' code and documents are on our website
